

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (original): A home page moving method for moving a home page from one server to another server, comprising the steps of:
 - (a) receiving main home page data from a source server in which home page data to be moved is stored;
 - (b) extracting data requiring modification from the received data;
 - (c) converting the extracted data into a format suited for a destination server by referring to a mapping table for storing mapping relationships, said mapping relationships are determined by the environments of the source server and the destination server; and
 - (d) transferring and transplanting data including the converted data to the destination server.
2. (currently amended): The home page moving method of claim 1, prior to the step (d), further comprising the steps of:
 - (pd-1) determining whether or not a next page exists in a hierarchical manner;
 - (pd-2) if ~~it is determined~~ a determination is made that ~~a~~ the next page exists, in the step (pd-1), sending a request for the corresponding page to the source server;
 - (pd-3) receiving the requested page from the source server; and
 - (pd-4) if ~~it is determined~~ a determination is made that ~~a~~ the next page does not exist, in the step (pd-1), proceeding with the step (d).

3. (currently amended): The home page moving method of claim 2, wherein, in the step (pd-1), when a uniform resource locator (URL) of the next page is detected, ~~it is determined that a~~ a determination is made that the next page exists in a hierarchical manner.

4. (original): A computer-readable recording medium in which a computer program for performing a home page moving method for moving a home page from one server to another server is stored, the computer program comprising instructions for performing a home page moving method including the steps of:

(a) receiving main home page data from a source server in which home page data is stored;

(b) extracting data requiring modification from the received data;

(c) converting the extracted data into a format suited for the destination server by referring to a mapping table for storing mapping relationships, said mapping relationships are determined by the environments of the source server and the destination server; and

(d) transferring and transplanting data, including the converted data, to the destination server.

5. (original): The computer readable recording medium of claim 4, wherein the instructions include program codes.

6. (currently amended): The computer-readable recording medium of claim 4, wherein, prior to the step (d), the home page moving method further comprises the steps of:

(pd-1) determining whether or not a next page exists in a hierarchical manner;

(pd-2) if ~~it is determined that a~~ a determination is made that a next page exists, in the step (pd-1), sending a request for the corresponding page to the source server;

(pd-3) receiving the requested page from the source server; and

(pd-4) if ~~it is determined that a~~ a determination is made that the next page does not exist,
in the step (pd-1), proceeding with the step (d).

7. (currently amended): The computer-readable recording medium of claim 6,
wherein, in the step (pd-1), when a uniform resource locator (URL) of the next page is detected,
~~it is determined that a~~ a determination is made that the next page exists in a hierarchical manner.

8. (original): A device comprising:

a mapping table for mapping home page data stored in a source server into home page
data to be stored in a destination server based on the environments of a common gateway
interface (CGI), a database, a bulletin board of the source server, and a bulletin board of the
destination server; and

a data converter for converting the home page data stored in the source server into a
format suited for the destination server by referring to the mapping table.

9. (original): The device of claim 8, further comprising a data transceiver for
receiving the home page data from the source server and transmitting data, including the
converted data, to the destination server.

10. (new): The home page moving method of claim 1, wherein said environments are
at least one of a common gateway interface (CGI), a database, a bulletin board of the source
server, and a bulletin board of the destination server.

11. (new): The home page moving method of claim 3, wherein the URL of the next
page is in said home page.
